

# OSVYNAC-TH Tablet

## *Dual Relief from Muscle Spasms and Pain*

**Relieve spasms. Reduce pain. Restore comfort.**

## Product Overview

OSVYNAC-TH Tablet is a dual-action combination therapy designed to effectively relieve pain and discomfort caused by muscle spasms. It combines a muscle relaxant with a non-steroidal anti-inflammatory drug (NSAID) to reduce stiffness, ease muscle tension, and alleviate inflammation—ultimately improving mobility and physical comfort.

## Active Ingredients & Their Functions

### **Aceclofenac (100 mg)**

- NSAID that inhibits COX enzymes
- Reduces inflammation, pain, and swelling

### **Thiocolchicoside (4 mg)**

- Muscle relaxant that acts on the central nervous system
- Relieves muscle spasms and improves mobility

## Benefits of OSVYNAC-TH Tablet

- Effective in managing muscle spasm-related pain
- Reduces inflammation and discomfort
- Improves muscle flexibility and physical function
- Promotes quick relief from neck, back, and vertebral pain

## Common Uses

- Degenerative vertebral disorders
- Vertebral static issues
- Low back pain
- Dorsal pain
- Torticollis (neck muscle contractions)

## Directions for Use

- Take as directed by your physician
- Swallow whole with water, preferably after meals
- Do not crush, chew, or break the tablet

## **Storage Instructions**

- Store in a cool, dry place away from sunlight
- Keep out of reach of children

## **Possible Side Effects**

- Diarrhea
- Nausea or vomiting
- Dizziness or drowsiness
- Stomach discomfort or pain
- Elevated liver enzyme levels (on long-term use)

## **How It Works**

Aceclofenac blocks the COX enzyme to reduce inflammation and pain, while Thiocolchicoside acts on the central nervous system to relax skeletal muscles and relieve spasms. Together, they reduce stiffness and restore physical mobility.

## **Overdose Information**

Avoid exceeding the prescribed dose. Overdose may cause seizures, nausea, or dizziness. Seek medical attention immediately if an overdose is suspected.

## **Precautions & Contraindications**

- Avoid in patients with ulcers, liver/kidney disease, or heart conditions
- Not recommended for use during pregnancy or breastfeeding
- May impair male fertility—consult your doctor if planning to conceive
- Limit alcohol use due to increased risk of gastrointestinal bleeding
